Criando Models e Controllers

A terminal window titled 'root@6a5705a7182b: /var/www/projeto2' displays a series of commands and their outputs. The left sidebar shows icons for various applications like a terminal, file manager, and code editor. The terminal output shows the execution of 'php artisan migrate' followed by several 'Migrating' and 'Migrated' messages with timestamps. Then, 'php artisan make:model' is used to create 'Produto', 'Venda', 'Itensvenda', 'Entrada', and 'Itensentrada' models, each with a 'Model created successfully.' confirmation. Finally, 'php artisan make:controller' is used to create 'ProdutoController', 'VendaController', 'ItensvendaController', 'EntradaController', and 'ItensentradaController', each with a 'Controller created successfully.' confirmation. The terminal ends with a prompt 'root@6a5705a7182b: /var/www/projeto2# '.

Banco com as tabelas criadas no projeto2

The screenshot displays the phpMyAdmin interface in a web browser. The address bar shows the URL: `localhost:8081/index.php?route=/table/structure&db=projeto2&table=fornecedor`. The left sidebar shows the database structure, with 'projeto2' selected and the 'fornecedor' table highlighted. The main panel shows the 'Estrutura da tabela' (Table Structure) view for the 'fornecedor' table. The table has 6 columns: 'id' (bigint, UNSIGNED, AUTO_INCREMENT), 'created_at' (timestamp), 'updated_at' (timestamp), 'nome' (varchar(60), utf8mb4_unicode_ci), 'endereco' (varchar(60), utf8mb4_unicode_ci), and 'email' (double). The bottom section shows the 'Índices' (Indices) tab, which is currently empty.
